## CELL CULTURE BAGS

January 2019

- Cell Culture & Harvest
- Cryo-Storage
- Centrifugation
- Electron Beam (e-beam) Sterilized
- Leak Tested
- Customizable Configurations

Lampire Omni C3 Cell Culture Bags are a simple, single-use device manufactured for the culture, harvest and storage of cells. Gas permeable, the Omni C3 Cell Culture Bag allows for the efficient transfer of gases, making it unnecessary for gassing the cultures. In addition, or in lieu of the screw cap fitment, which facilitates cell harvesting, the bags can be fitted with Luer-lock ports and/or needle ports for aseptic inoculation and sampling. These sterile connections minimize the opportunity for culture contamination. Ports can be used to connect several bags in a series for production scale-up. Omni C3 Cell Culture Bags can be customized to include the quantity, and type, of ports needed for each project. Our bags support rapid cell growth and are hardy enough to be used in centrifugation and/or for long-term cryo-cell storage. Also, using collapsible bags will reduce the amount and cost of collection of biological waste in your lab.

The Omni C3 Cell Culture Bag will perform well with suspension cell lines such as hybridoma, CHO and HEK293. Adherent cell lines can be grown with the addition of an artificial polyester mesh substrate. Cell scaffold material is also available as an option and can maximize the production of anchorage dependent cells. These research use only bags are available in multiple standard sizes and configurations, or can be customized for your project needs. Looking for optimal cell growth? Make sure to sample our catalog cell culture media products or reach out to our technical team to have your own custom formula manufactured.
